

## Lansering av Visual Studio 2005

NorProvider AS er stolt av og kunne tilby Microsoft Visual Studio 2005 til våre kunder. Microsoft skriver selv:

### Microsoft Utviklerverktøy

"Microsoft har lange tradisjoner med å lage utviklerverktøy &ndash; vårt første produkt var en Fortran compiler i 1975.

Vårt hovedprodukt nå er Visual Studio 2005 og det er dette vi selv bruker til å utvikle våre egne produkter som Windows og Office.

Visual Studio 2005 er et integrert verktøysett som gir deg som utvikler alt fra debugging til livs-syklus verktøy i ett. Vi mener at våre produkter gir kode med høyere ytelse enn konkurrentenes, men det viktigste er kanskje at Visual Studio 2005 gir deg som utvikler vesentlig høyere effektivitet. På noen områder dreier det seg om å skrive 70% mindre kode enn i forrige versjon som allerede var det beste på markedet."

Gå direkte til produktoversikten.

Du kan handle Microsoft Visual Studio 2005 både i vår netthandel, og ved å ta kontakt med oss på telefon eller e-post.

Visual Studio finnes tilgjengelig i følgende versjoner:

### Visual Studio 2005 Product Line Overview
